

Oasis Hot Tub Start Up Instructions

1. Put hose into the filter compartment when filling the hot tub.
2. Do not fill the tub with hot water.
3. If you are on well water with heavy iron, you should purchase a pre filter that screws onto your garden hose to filter the water while filling your hot tub. (about \$25 on Amazon.)
4. After your hot tub is filled you can turn on the breaker.
5. Set the water temp to about 100 degrees to start and then adjust from there for the temp you like.

Chemicals

1. Turn your jets on high and add about 2 tablespoons of granulated chlorine to the hot tub.
2. Every time you get out of the hot tub add (with jets on high) about 1-2 tablespoons of granulated chlorine per person up to a max of about 4 tablespoons. Note: You should add a minimum of 1-2 tablespoons of granulated chlorine per week.
3. If you leave the jets on they will automatically turn off after 15 minutes.
4. The hot tub is programmed from the factory to go through a filtration cycle every 12 hours.

How to drain your Oasis Hot Tub

1. Locate drain plug. 
2. Pull the handle out and unscrew plug. 
3. Push the drain nozzle all the way in to open the valve and drain the water. 
4. After the hot tub is drained, screw the plug back on, then pull it out to fully tighten. Then push it back in the original position.

Note: On the hot tubs with the ice bucket (8102B & 8103B) there are 2 drain plugs one for the ice bucket and one for the hot tub water.
